

Providing inflatable airframe shelters in an innovative, portable, cube. Suitable for modern disaster response and other events.

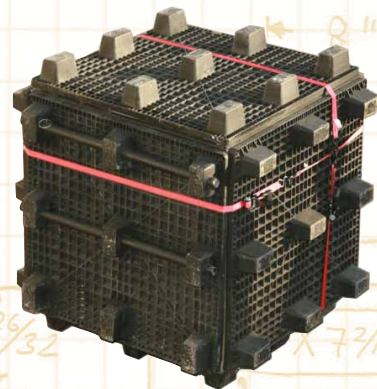

SHIPPING CONTAINER & PLATFORM | The Life Cube is the only tent system with an integrated, hard-surface floor. Made from durable hard plastic, the shipping container serves a dual purpose by unfolding to create a sturdy 144 square foot raised platform. This not only separates you from all the elements nature has to offer, it also serves as an anchor during moderate winds so no tie-downs are required.

Exclusive to the Life Cube, the shipping container also comes with our patented integrated steel hoops that unfold to allow easy maneuverability over the most challenging terrain.

INFLATABLE AIRFRAME CANOPY | The inflatable canopy is manufactured by the Patten Company, makers of NAVY life-rafts for over 50 years, using a military grade, Siemens polyester fabric that is tear-proof and fire-retardant. Built to survive in the harshest conditions, the patented structural beam design will withstand 50 mph sustained winds.

To suit any sized sheltering need, the canopy is designed with three door ways to allow units to be lined-up and zipped together creating multiple-room live, work, and entertainment space with independent access.

INTERIOR STORAGE SPACE | In addition to the canopy, the interior of the cube has enough room to store end-user-specific contents prior to deployment, making the Life Cube the only piece of equipment you need. Upon arrival at your destination, simply roll out the unit, unfold, and inflate; hit the lights, turn on the radio and you're online! Optional packages include an *electrical system* with 12-volt battery, solar panel trickle charger, lighting, electric pump, and communications station; *propane system* with cooking stove and catalytic heater; and *infrastructure system* with table and telescopic uprights for wind support. That's why the Life Cube is your *complete* shelter solution.
